Dr KONE™

First time in India - Sticker, Adjuvant and Penetrator - all in one pack!

Dr KONE™ is a proprietary natural surfactant product, extracted from selective strains of naturally occurring microbes.

Dr KONE™ is recommended for use on cereals, pulses, oilseeds, vegetables, fruit crops and horticultural crops - along with any plant protection agent as a tank mix.

The microbes produce certain amphiphilic compounds that are excreted extracellular hydrophobic and hydrophilic moieties that allow the organism to accumulate between fluid phases. This makes Dr KONE™ a unique spreader since it reduces surface and interfacial tension.

Reduces spray water volume by 30%.
